## **Shutters Without Bottom Support**

Woodlore shutters without bottom support will be more likely to sag and deform. Therefore we highly discourage the use of shutters for this application. We will continue to manufacture these shutters, but please be aware that Woodlore shutters will not be covered under our warranty, and will be subject to the guidelines listed below:

All Woodlore panel configurations:

- ◇ In situations where shutters will not have bottom support, customers must inform Limb Corporation when initially placing the order.
- ◇ Informing Limb Corporation when placing the orders ensures that the factory will add extra hinges to support the panel. This will reduce the probability of the panels sagging and increase shutter integrity. Customers must release liability.
- ◇ If customers fail to notify Limb Corporation that the shutter will be used without bottom support, this will constitute a misapplication of the shutter, and consequently, customers will be responsible for the cost of any RGA that is submitted.
- ◇ If customers want a bifold, a track must be ordered to support the panels. Without a track, Norman Shutters will not manufacture the order even with liability waived.
